

## GSM Mobile Network Intercoms & Access Control

Designed for residential buildings with multiple occupants such as apartment blocks, our innovative wireless intercoms provide the perfect solution to long-range wireless intercoms.

Simple and cost-effective to install and use, our intercoms allow you to manage multiple properties remotely, and in real-time.

Using GSM-based wireless technology, our intercoms enable residents to control property access from their own mobile phone.

Unlike a typical wireless intercom which use much weaker radio-frequency signals, these GSM intercoms use the mobile network via a SIM card.

They are not limited by the available radio frequencies utilised by older types of wireless intercom; a feature which gives them unlimited wireless range.

### Simple, cost effective installation

Quick and simple to install, our wireless door entry systems eliminate the need for installers to enter the building and can be installed in just a few hours.

### Real-time & remote management

Our intercom systems have no wires, handsets or mechanical keys. Using GSM-based wireless technology, our intercoms enable residents to control property access from their own mobile phone.

How it works:

**Intercom button is pressed**

This will call the pre-defined telephone number of the resident (this can be their landline number or mobile number).

**The resident sees them, and answers**

The resident can see the visitor and answer their mobile phone, landline or tablet whether they're at home or not.

**The resident opens the door**

The resident can grant access to the building by unlocking the door using their mobile phone, landline or tablet.

# Secure online management platform

Conveniently manage multiple properties remotely on a single platform with real-time updates. Our easy to use online management platform gives full visibility over who has access to your property and when. Through the platform you can manage all of your properties, products, access points and users.

By simply creating an account and registering your products to your account, you can configure unique access permissions for all residents and users, including assigning key fobs, transmitters and codes.

With unlimited free updates, you can easily make remote, real-time updates to:

Resident details

Activating/deactivating new key fobs

Granting remote access for contractors

## Features

### Video communication

Video calls are available with the app

### 4G

Equipment can be connected to mobile phone networks

### Audio

Audio communication with landline and mobile phones

### Data

Equipment can be connected to wireless networks

### Wireless intercom

No need for extensive cabling

### Real-time management

Have full visibility and manage/update multiple properties remotely in real-time

### Hearing loop

Most of our intercoms include a hearing loop that connects to hearing aids

### Hands-free key fobs

Allows contactless door opening

### Cloud based portal

Easily access and manage your data anytime, anywhere

### Email alerts

Alerts can be sent directly to registered contacts
